

LOBT + Cone 04 to 01 not food safe (Don Pilcher for Rascal Ware)

Frit 3110	36
Barium Carb	28
Soda Ash	11
Colemanite	7
E.P.Kaolin	5
Silica	13

Add colorants (oxides, carbonates and stains) and/or opacifiers

This glaze is taken after a Lisa Orr formula. If you want to really live on the wild side, try lead frit 3403 in place of 3110. These formulas favor intense and pleasing colors by virtue of their low alumina and high soda or lead content. Mix well, maybe use a blender. Store mixed glaze in an airtight container to prevent the soda ash from crystalizing.

ALL kiln firings should be vented properly; this is especially true when lead or other metal vapors may be expelled.
